

# SEAT

## FOR SPORTS FACILITIES

### MODEL OLIMP

## PRODUCT DESCRIPTION

### Seat and backrest:

- made from high-quality polypropylene in the form of monostratal elements
- have a smooth and delicate to touch surface, which makes a positive aesthetic impression and facilitates cleaning
- all plastic moulding edges of the chair are rounded – improved safety of use without any sharp elements
- the high backrest has a profiled, ergonomic and comfortable shape
- metal engraved number plates can be mounted to the upper frontal surface of the seat
- with UV stabilising additives

### Seat self-tilting mechanism:

- gravitational self-tilting mechanism of the seat (proper loading of the rear part)
- the plastic seat is fixed to a metal supporting structure using rivets
- the pendulum supports the sitting person's weight and – in order to ensure a smooth lifting system – it moves in Teflon sleeves, which guarantees many years of defect-free utilisation of the chair
- rubber ends of the pendulum guarantee quiet operation
- upon request, we can produce a system of spring lifting to be used in closed facilities

### Steel supporting structure:

- the metal supporting structure is manufactured in the form of legs screwed into the foundation or a suspended construction mounted to a wall
- normally the chairs are intended to be fixed in rows with a shared leg
- upon request, the chairs can be made in the form of single and individually fixed constructions
- the metal elements of the chairs can be powder coated with any colour from the RAL colour standard, hot galvanised, or galvanised and painted in the Duplex system
- the metal structures supported on the shared leg system are made from 40 x 30 mm profiles, while the structures fixed individually – from 30 x 30 mm profiles
- upon request, we can provide additional reinforcement of the backrest by applying a pipe fi. 16 mm
